

Grow your revenue with Artificial Intelligence

INCREASE PRODUCTIVITY BY AUTOMATING
REPETITIVE AND TIME-CONSUMING TASKS

Choose the Artificial Intelligence technology that best suits your needs

Vision: defect analysis, object tracking, extracting information from images and videos.

The perfect technology if your company uses vision tools to recognize objects, both static and moving, and details within images.

Language: virtual assistant, text comprehension, reasoning system.

Do you need to optimize the time spent reviewing documents and analyzing questionnaires? NLP can automatically extract information from written and spoken data, and generate text and information.

Predictive: failures prediction, forecasting classification, sales estimation, stock procurement.

To analyze your company's historical data, discover recurring patterns, and make better decisions in the future.

Implementing AI-Based solutions **improves business performance**

Lower-value-added activities that are just a huge cost to the company and stress on the human factor can (and will) be automated by an AI system, giving more time and money to the company to invest in higher-value-added activities.

Why choose us

We deliver AI solutions **quickly, accurately and effectively** depending on the needs of the business and the complexity of the solution required thanks to our **BlueTensor Framework™**.

We know very well that ***the importance of a method is having one*** which is why we have created a framework to simplify and speed up the solution delivery process. With a validated approach and a focused team, we **are expanding our reach in Italy and exploring new growth opportunities**.

*“In **less than six months**, the man-time dedicated to quality-check was reduced by 50%. We recently carried out a test on 57 components and on these 57 components the operator identified 91 defects, while the Artificial Intelligence identified 180, so not only did it identify all those already identified by the operator, but has **identified more**, thus **exceeding even our expectations** of the process itself.”*

Marco Moscatti, CEO TEC Eurolab

Antonio Bicego - *Founder Studio Bicego Srl*

"My collaborators and I approached BlueTensor for a feasibility project of applying AI to our field, Personnel Search and Selection. They were **clear, competent, and honest**, and I can therefore say that my approach to their expertise was **excellent** and continues. I have to say that already from their excellent Podcast, I think this could be inferred."

Carmen Vallese - *Business Innovation Specialist Acea SpA*

"**Professional and available.** We collaborated to create a Proof of Concept to show the potential and benefits of Artificial Intelligence and Computer Vision technologies to digitize information and help improve the asset management process."

Mattia Vergerio - *Co-Founder E-Commerce School, Amazon Expert, Keynote Speaker*

"Professional and knowledgeable. They really cared about the details and our needs. Their helpfulness and teamwork made it possible to **solve even more complex problems!**"

Paolo Beghini - *Founder & CEO of The Sneakers Box*

"Young, dynamic and proactive, and highly experienced. We appreciated the direct contact with the professional team and their ability to **find solutions in real-time.**"

Prof. Paolo Giorgini - *Director Department of Engineering and Information Science, University of Trento.*

"They took an **interest in the details and our needs.** Their helpfulness and teamwork made it possible to solve even more complex problems!"

Pierluigi Paoletti - *CEO Paoletti Srl*

"**Excellent problem solvers.** Pragmatic, down-to-earth, knowledgeable, and, above all, reliable."

Our practice and engagement

Customized solutions with the preliminary feasibility study

To evaluate whether the investment meets your need and will lead to the desired results, we will conduct a preliminary analysis by developing a pilot version of the AI software to evaluate its performance. If the outcome is positive our team will create tailor-made AI software.

High-value multidisciplinary team and constant support

Our team is fully focused on customer needs and objectives, and is always available to design new ways to reduce the time, cost and risk of the activities.

Maximum ROI and solid guarantees

Skills, scalability, and speed of implementation guarantee the maximum return on investment. After project validation, we offer an additional guarantee period to correct any defects that may arise after project acceptance. We are sure about the results.
