AI has progressed to become business critical for companies both big and small. Analytic decisions based on incomplete or inaccurate data, models, workflows, and processes can have dire consequences in a world where regulatory compliance, company reputation, and ethical concerns are growing.

IBM AI governance delivers an overarching solution designed to direct, manage, document and monitor the data and AI activities of an organization, decreasing risk and strengthening the ability to meet regulatory compliance.

Attend the IBM keynote "AI Governance, Break open the Black Box"
with Priya Krishnan, Director, Product Management, IBM Data and AI
Thursday, February 9, 2:50 pm – 3:15 pm,
Conference Room Méditerranée
