Kiwi TCMS is an open source test management system made in Europe 🇪🇺 🇮🇹!
It is used during software testing and quality assurance to collect information about what and when has been tested, which versions/builds of the product have been tested and in what environment. This information is helpful when making a go/no-go decision before a release, monitoring and planning the workload of the QA team and for various reports.

When doing manual testing each engineer on the team can easily find the tasks assigned to them and all instructions necessary to execute the tests and record the results.

In automation testing scenarios TCMS systems are useful to collect test execution information and later analyze it. This is especially important when you don't execute all of the tests all of the time!

IF it's not in Kiwi TCMS then you don't test it !

Brief history of Kiwi TCMS in France :

- November 2018 - initial French translation by **Christophe CHAUVET**
- April 2020 - **Armadeus Systems** (armadeus.com) - ARM and FPGA based embedded Linux systems - first customer from France
- March 2022 - **/e/ Foundation (Murena)** publishes a "Test session with Kiwi" documentation - <https://doc.e.foundation/testers#test-session-with-kiwi>
- **CAP'TRONIC** (captronic.fr) - several training courses include Kiwi TCMS
- **e*Message** (kiwi-tcms.emessage.fr) - most active French installation
- **Allianz** (kiwitcms.oav-allianz.fr) - actively uses Kiwi TCMS
- **Hiir.o.app** (kiwi.paris-int.hiir.o.app) - uses Kiwi TCMS for testing **Paris 2026 Marathon** support in their mobile application
- **Airbus CyberSecurity / Thales Group** (kiwi.dev.cyberrange.fr) - latest Kiwi TCMS instance in France

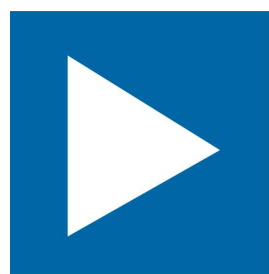

IF it's not in Kiwi TCMS then you don't test it !
