

TwoECO[®], the double ecological innovation for DIY and Garden

BrikUP modular interlocking Brick and durable outdoor Tiles: a range designed for strong retail performance

TwoECO[®], a benchmark brand in sustainable innovation, unveils its new outdoor range in bi-component material, manufactured from recycled plastic derived from Tetra Pak food cartons and FSC[™] certified wood residues. Through its partnership with Tetra Pak, the company is fully aligned with a circular economy model, reducing its environmental impact without compromising quality, strength, or design.

Through a controlled recycling process, TwoECO combines the strength of post-consumer recycled plastic with FSC[™] certified wood fibers, creating a double virtuous cycle that transforms waste into high value-added resources.

Ecological innovation and uncompromising functionality

Suitable for verandas, gardens and terraces, the **TwoECO** range is perfectly adapted for pergola flooring, garden sheds and outdoor storage areas. It also enables the creation of structured outdoor spaces, such as defining children's play areas or building low walls separating dining spaces from recreational zones. Its high thermal and mechanical resistance allows it to withstand heavy loads, making it suitable for driveable surfaces, parking areas and pathways.

"Our ambition is to combine design and durability in order to offer innovative and responsible solutions. Thanks to an exclusive manufacturing process developed by TwoECO[®], we have overcome the technical challenges associated with combining materials with very different transformation properties. We thus give recycled materials a second life, reduce waste, and contribute to the creation of more sustainable spaces. The TwoECO material is fully reusable, with no cycle limit."

Ezio Rudelli, Product Development Manager, TwoECO[®]

A Commitment that Redefines Materials for a Greener Future

TwoECO's commitment is reflected in a product range that combines technical performance and environmental responsibility, meeting the growing market demand for sustainable and circular solutions.

"Where materials change, the future takes shape."
