

## Architecture Diagram

## Solution Overview

### Optimize logistics with scanning application for efficient warehouse management

Use the scanning Application to optimize logistics processes as efficiently as possible. The application offers standard processes of receiving or shipping the material, inventory process, but also internal warehouse movements.

# SNAP VAT Number Verification

## Flexible scanning: QR codes, barcodes or UDI codes

Our app simplifies standard QR codes, barcodes, UDI codes and GTIN codes scanning. This user-friendly feature enhances accuracy, reduces errors, and boosts overall productivity, ensuring a seamless and efficient workflow for businesses with automatic focus on the customer's captured code.

## Online and offline versions

"Goods Movement" works offline, saving data in "Goods Movement Queue." Where "Inbound Logistics" also operates offline, using the "Inbound Logistics Queue" for data storage. Connectivity restoration allows task confirmation, editing, or deletion, streamlining workflows for both of the functions.
