## Quality

We use the Military Standard system for the in-process monitoring and sampling. Each phase of work is periodically controlled and recorded using software designed by our IT managers. Every product, raw material or semi-finished product is Labeled for full traceability. In addition each machine is equipped with quality controls Systems among the most advanced on the market.

## Security – Anticounterfeiting

We can offer tools to enhance security and Traceability of our customers products, from Application of RFID labels to TAG NFC to digital fingerprinting and many others.

WE KNOW NOW

# VIMER FOR SUSTAINABILITY

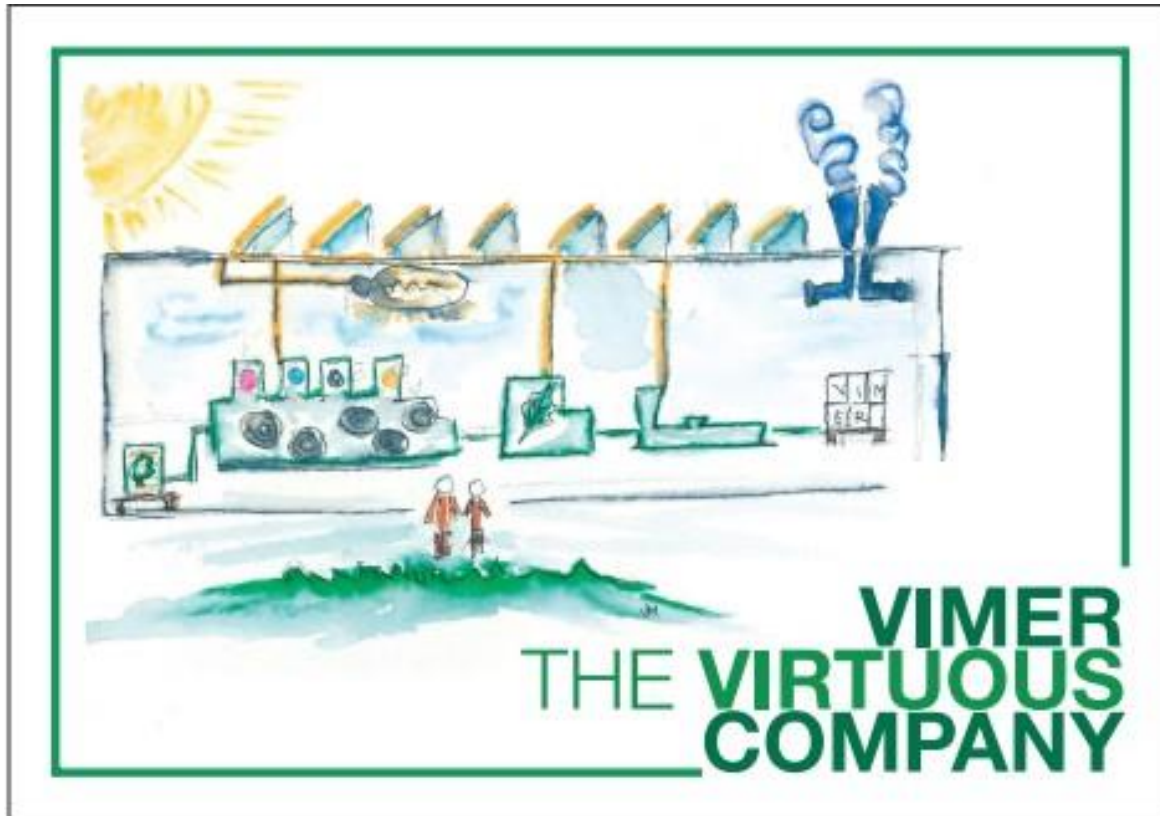

New generation printing system with energy savings of 40% compared to the previous one replaced.

WE KNOW NOW

# VIMER FOR SUSTAINABILITY

The commitment starts with energy saving:

As part of our commitment to sustainability and the stability of our production structure, we have undertaken some key strategic investments that have been active since March 2023

We have expanded our investment in energy produced from renewable sources.

The remaining energy needs will be purchased from certified renewable sources. As of January 2024, 100% of the energy used will come from renewable sources with an impact = CO2.

The state-of-the-art photovoltaic system includes tracking and optimized panels to obtain maximum efficiency in all conditions.

A production line has also been replaced with the insertion of a totally new, technologically advanced line that will give energy savings of about 40% compared to the current one.

All machines are equipped with inverters and compressed air is generated centrally, this allows us to save up to 5 times the energy compared to normal.

We have built charging stations for electric cars that are free to use for our employees and collaborators.

WE KNOW NOW

# VIMER FOR SUSTAINABILITY

Improvement data:

70% of our energy is produced by our innovative solar panels, their internal celluls follow the sun.

On 2024, the remaining 30% has been supplied by renewable sources.

# VIMER FOR SUSTAINABILITY

## CARBON FOOTPRINT

We are certified to measure the carbon footprint of our products.

We can give our customer an idea of the CO2 involved in the production of their products.

Thanks to this we can work with our customers on ECO Designs and processes to create more sustainable packaging.

WE KNOW NOW

# VIMER FOR SUSTAINABILITY

Green is the new glam

One of Vimer's main goals has always been to be able to offer its customers environmentally friendly items and processes, following the common feeling of environmental sustainability.

All this has resulted in the implementation of concrete actions and the achievement of some important certifications as evidence of the company's commitment.
